Everything You Need for Experimental Quantum Hardware Engineering

University of Minnesota

Onri Jay Benally

July 2023

This document is meant to provide some level of consolidation for those desiring to be involved with quantum hardware engineering. By doing one's best to maintain familiarity with these topics, it is possible to become one who designs, builds, tests, operates, and maintains real quantum machines - a quantum mechanic. Another possibility is to begin working on a doctorate degree in the associated field with these training resources on hand. There are many clickable links in this document, so it might be best to view it using a browser or PDF viewer.

My decision to share these resources is because they have been useful to me in my PhD work. This has been a very interesting path for me as an tribesman from the Navaho Nation. Here is the path: carpenter $\Longrightarrow$ electric vehicle researcher $\Longrightarrow$ nanotechnologist $\Longrightarrow$ quantum mechanic.

Please note that open access is a key theme held herein. Enjoy. -Onri

Chapter 5

Quantum-Applicable Degrees: BS to PhD

Non-Exhaustive List:	
Physics (Experimental or Applied)	Computer Engineering
Quantum Science & Engineering	Chemistry
Quantum Technology	Chemical Engineering
Engineering Physics	Physical Chemistry
Electrical Engineering	Systems Engineering
Electrical & Computer Engineering	Mechanical Engineering
Materials Science	Nanoscience
Materials Science & Engineering	Nanoengineering

Chapter 6

Quantum Science Curriculum Example

Courses:		
AEP	1200	Introduction to Nanoscience & Nanoengineering
AEP	2550	Engineering Quantum Information Hardware
AEP	3100	Introductory Quantum Computing
AEP	3610	Introductory Quantum Mechanics
AEP	3620	Intermediate Quantum Mechanics
AEP	4400	Nonlinear & Quantum Optics
AEP	4500 / PHYS 4454	Introductory Solid State Physics
CHEM	7870	Mathematical Methods of Physical Chemistry
CHEM	7910	Advanced Spectroscopy
CHEM	7930	Quantum Mechanics I
CHEME	6860 / SYSEN 5860	Quantum Computing & Artificial Intelligence
CS	4812 / PHYS 4481	Quantum Information Processing
ECE	4060	Quantum Physics & Engineering
ECE	4070	Physics of Semiconductors & Nanostructures
ECE	5310	Quantum Optics for Photonics & Optoelectronics
ECE	5330	Semiconductor Optoelectronics
MSE	5720	Computational Materials Science
MSE	6050	Physics of Semiconductors & Nanostructures
PHYS	2214	Physics III: Oscillations, Waves, & Quantum Physics
PHYS	3316	Basics of Quantum Mechanics
PHYS	3317	Applications of Quantum Mechanics
PHYS	4443	Intermediate Quantum Mechanics
PHYS	4444	Introduction to Particle Physics
PHYS	4410 / PHYS 6510	Advanced Experimental Physics
PHYS	6572	Quantum Mechanics I
PHYS	6574	Applications of Quantum Mechanics II
PHYS	7636	Solid-State Physics II
PHYS	7645	An Introduction to the Standard Model of Particle Physics
PHYS	7651	Relativistic Quantum Field Theory I
PHYS	7652	Relativistic Quantum Field Theory II
PHYS	7654	Basic Training in Condensed Matter Physics

Chapter 7

Shortcut into Quantum Hardware Engineering

- Start with a 3D modeling & linguistics framework, may involve a custom keywords glossary. - Know that this specialty involves learning to probe something without necessarily having to physically contact its surface. This is what spectroscopy or "scatterometry" is about. - Typically, topics covered under quantum hardware engineering are combinations of materials science & engineering, quantum metrology, quantum transport, quantum optics, & quantum electronic design automation. - Know how electronic filters are configured or set up. - Know how electronic filters are designed & what they look like. - Know what components various filters are made of. - Know the difference between passive & active filters. - Know the difference between optical, microwave, & radio frequency (RF) isolators, circulators, & mixers. - Be aware of different room temperature & cryogenic amplifiers. - Know what room temperature & cryogenic amplifiers are made of. - Know the different types/hierarchy of amplifier noise (thermal, shot, external, quantum). - Know how a signal curve or response is manipulated. - Know how signals are triggered. - Know what impedance matching is (how many ohms is required). - Know how a Smith chart works. - Know the many purposes of a resistor (there's a whole list). - Know what multiphase power means. - Know what a resonator & resonator cavity is. - Know what vector network & spectrum analyzers, arbitrary waveform generators, & signal generators do. - Know what an oscillator circuit does (voltage fluctuation or AC). - Know what an inverter circuit does (DC to AC conversion). - Know what a rectifier circuit does (AC to DC conversion). - Know what high-pass, low-pass, band-pass, band-stop filter circuits/crossover networks do (signal filtering). - Know what a comparator circuit does (threshold indicator). - Know what a few basic logic gates can do (calculator). - Know what a PID [closed-loop] controller does (electronic-based self-balancing). - Know what a feed forward [open-loop] controller does (electronic-based self-balancing alternative). - Bonus: know how to build a simple electronic audio amplifier device (many components similar to quantum computing systems).

Chapter 8

Most Useful Coding Topics for Hardware Engineers

- Library installation - Syntax & commenting - Curve fitting, direct parameterization, & mesh parameterization - Automation scripting - Data management & data structures - Parallel processing & accelerated computing techniques - Interpolation & extrapolation - Linear regression - Signal processing - Noise plots - Manual debugging

Chapter 9
